PROFILE

I'm a junior backend developer working with Python, Django, and Django REST Framework. My recent work includes a Notes REST API with CRUD operations and API documentation, along with session, token, and JWT authentication exercises. I've also configured Django with Gunicorn and Nginx on Linux. I'm continuing to build my skills in testing, databases, and API security.

TECHNICAL SKILLS

Programming: Python, JavaScript, HTML, CSS

Backend: Django, Django REST Framework, REST APIs, CRUD operations, OpenAPI/Swagger

Databases: Django ORM, SQLite

Authentication: Session authentication, token authentication, JWT, access and refresh tokens, authenticated endpoints

Tools and deployment: Git, GitHub, Linux (Fedora), Gunicorn, Nginx

BACKEND PROJECTS & PRACTICAL WORK

Notes REST API | Django, DRF GitHub repository

- Built a Notes API supporting create, read, update, and delete operations.
- Used Django models, serializers, viewsets, and routers to handle requests and database operations.
- Added interactive API documentation using OpenAPI and Swagger.

Backend Authentication | Django, DRF, JWT GitHub repository

- Implemented session, token, and JWT authentication using Django REST Framework.
- Built registration, login, logout, and authenticated user endpoints.
- Tested expired access tokens, token refresh, and refresh-token blacklisting during logout.

Django Deployment on Linux

- Configured and deployed a Django application using Gunicorn and Nginx on Linux.
- Worked through environment configuration and SELinux issues during deployment.

Python Problem-Solving Practice GitHub repository

- Practiced arrays, sets, linked lists, binary search, and other data structures, comparing solutions using time and space complexity.
