PROFILE

Early-career backend developer focused on Python, Django, and Django REST Framework. My hands-on practice includes CRUD APIs, authentication and permission checks, and configuring Django with Gunicorn and Nginx on Linux. I'm continuing to improve my database, testing, and API security skills through small, practical exercises.

TECHNICAL SKILLS

Programming: Python, JavaScript, HTML, CSS

Backend: Django, Django REST Framework, REST APIs, CRUD operations

Databases: Django ORM, SQLite

Authentication: Session and token authentication, permissions, JWT fundamentals

Tools and deployment: Git, GitHub, Linux (Fedora), Gunicorn, Nginx

HANDS-ON TECHNICAL PRACTICE

Backend engineering exercises

GitHub repository

- Practiced writing CRUD API endpoints and working with HTTP requests and responses in Django REST Framework.
- Worked through authentication, API permissions, and Django ORM queries, testing how the backend responds to different requests.

Django deployment on Linux

- Configured a Django application to run with Gunicorn and Nginx on Linux.
- Troubleshot environment configuration and SELinux issues during deployment.

Python problem-solving practice

GitHub repository

- Practiced arrays, sets, linked lists, binary search, and other data structures, comparing solutions using time and space complexity.

EDUCATION

Business - Management Information Systems (MIS)

Arab Open University, Cairo

Undergraduate · Currently enrolled
